

STOP Idling. **START \$aving.**

WHY CARE ABOUT IDLING?

IDLING IS EXPENSIVE.

An idling car wastes up to .5 gallon per hour; a medium-duty truck may waste even more. While individual episodes may be small, the cumulative impacts of idling are large.

IDLING POLLUTES.

Each gallon of fuel burned emits about 20 lbs. of carbon dioxide, a greenhouse gas.

IDLING THREATENS HEALTH.

Tailpipe emissions contribute to the formation of ground-level ozone, which can damage lungs.

IDLING CAN BE AGAINST THE LAW.

Idling laws differ by location, vehicle type/weight, fuel type, and outside temperature.
